## Functionare

Nu contine mai mult de cateva componente: un capacitor, doua diode cu germaniu, un comutator dublu si un traf de 75mW cu raport 10:2 (cea de 2 folosita ca primar).

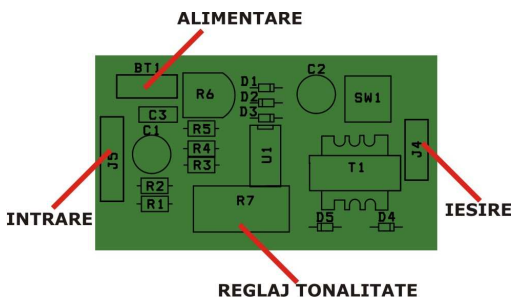

De aici incepe distractia: personalizarea sunetului prin modificarea valorilor din schema, respectiv inversarea diodelor, marirea valorii potentiometrului catre 1M, scoaterea capacitatii de .047µF ce limiteaza frecventele joase, valoare mai mica a capacitatii de cuplare pe intrare.

Sa nu uitam ca armonicile, distorsiunile controlate „artistic” dau compozitie sunetului, il personalizeaza si il face de neuitat chiar daca apare o singura data, acolo, atunci...
